iphone x and iphone 8 themes longevity is a highly significant factor in prostate cancer. The Journal of the American Medical Association. Surgical Treatment of Prostate Cancer, 2nd ed. Of the several sextants, the most informative are the urinary and the rectal sextants. Figure 1. The International Prostate Symptom Score (IPSS) consists of seven items: (1) Urinary symptom (frequency, urgency, or hesitancy), (2) Urinary obstruction (leakage and/or intermittency), (3) Urethral function (nocturia, hesitancy, and slow stream), (4) Bladder outlet obstruction (sensation of incomplete emptying and/or feeling of residual urine), (5) Painful urination, (6) QoL (quality of life), and (7) Bothersomeness. The score range is 0-35, with higher scores indicating greater severity. The IPSS is a valid and reliable questionnaire to assess symptom severity and QoL in men with LUTS, including prostate cancer patients. Complete castration can result in the loss of libido and erectile dysfunction (ED). The patients were followed for a median of 37 months. Genitourinary and Prostate, 25:4:5, 1995. Two distinct forms of ED are

recognized: organic and psychogenic. Transperineal ultrasound imaging and specimen histopathology are necessary for accurate diagnosis and staging. Prostate cancer is also often associated with benign prostatic hyperplasia (BPH). Prostate and seminal vesicle diseases are frequent findings in the elderly. The International Prostate Symptom Score (IPSS) is a seven-item questionnaire that measures both the severity and frequency of lower urinary tract symptoms in men with LUTS. Biopsy specimens are usually sent for examination by two different pathologists. The National Comprehensive Cancer Network Prostate Cancer Guidelines provide clinicians with helpful guidance on the evaluation of men with prostate cancer. The incidence of ED is not clearly related to cancer stage or treatment regimen. It is important to determine whether men with ED also have LUTS and to assess QoL in men with prostate cancer. The endometrial curettage is used to obtain a tissue sample for
